

Introducing Midas+ Live™

Real-time Clinical Surveillance

Version 1.0

With Midas+ Live you can identify emerging complications in real time, enable clinicians to return to care, and move to concurrent Core Measure and CQM compliance.

Midas+ Live features e-measures, core measures, and 22 complications including:

- Acute Myocardial Infarction
- SCIP
- Stroke (CVA)
- Deep Vein Thrombosis
- Pulmonary Embolism
- Surgical Site Infection
- SIRS
- Urinary Tract Infection
- Sepsis
- Pressure Ulcer
- Extreme Glycemic Aberrancies
- and more

Real-time Clinical Surveillance: Alerts clinicians to emerging complications, including HACs, using evidence-based medical research (including CMS, HITSP, CDC, NSQIP, and others).

Concurrent Compliance: Enables hospitals to fulfill Meaningful Use Clinical Quality Measures (eMeasures) and move to concurrent Core Measures assuring optimal outcomes prior to discharge.

Return To Care: Provides clinicians with an intuitive layout, showing relevant clinical information on multiple patients at a glance and creating a focus on care. Users include physicians, hospitalists, nurse managers, case managers, core measures, quality, and CDI.

Comparative Reporting: Maps information to a standard nomenclature so you can monitor trends in outcomes and compare quality performance.

SaaS Infrastructure: Leverages a Web-based (SaaS) infrastructure for more efficient and cost-effective implementation.
